

# FLOORING THAT YOU CAN WALK ON IN ONE HOUR!!!! .....I'D LIKE TO SEE THAT.

**MONOTEK® MMA resin rich, trowel-on, flooring systems will totally set to full mechanical and chemical resistance in less than one hour at temperatures from -30° to +40°C.**

**One hour** after your new MONOTEK® flooring is applied, you can drive a forklift over it, wash it, drill into it, and even spill process chemicals all over it, without any damage occurring.

MONOTEK® is ideal for long term protection and repairs to damaged existing concrete or tiled floors and also new concrete floor areas. MONOTEK® can be laid quickly (up to 300m<sup>2</sup> per day), so critical production downtime is kept to the absolute minimum. MONOTEK® is non-toxic, and contains no amines, solvents or styrene.

MONOTEK® flooring systems are specifically designed with the food manufacturing industry in mind, as they provide an anti-slip, easily cleaned, hygienic, chemical and abrasion resistant surface, that will perform to your expectations, year after year. The MONOTEK® flooring systems include coving, expansion jointing, high build mortars, flexible and even anti-static/conductive grades. MONOTEK® will have applications in all areas throughout your plant, as it has at most major food manufacturers, meat processing, dairies, breweries and bakeries throughout Australia and all over the world.

MONOTEK® flooring systems are **exclusively** supplied and applied by D.P.J. Coating Systems (an Australian owned family business, established in 1977), and come with a unique "excuse proof" - 5 year guarantee of performance. We never use subcontractors to apply MONOTEK® flooring systems.

If you would like more technical information about MONOTEK® flooring systems or a demonstration of just how fast setting our flooring is, please contact us for an equally speedy response.

3mm coating in dairy

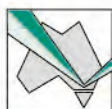

6mm coating in food production area

6-8mm flooring in Winery

## MONOTEK®

*the smart choice in applied flooring systems*
