

THE SMART CHOICE IN APPLIED FLOORING SYSTEMS

- ✓ One (1) hour fully cured & ready for full traffic
- ✓ Hardwearing & long-life anti-slip safety flooring
(Exceeds Aust. Standards for wet pedestrian traffic)
- ✓ Seamless & resilient – trowel applied flooring
- ✓ Highly abrasion, UV & chemical resistant
- ✓ Workmanship & Materials - 5 year guarantee

Train, Bus & Tram stations, Airports & public access community areas

MONOTEK® MMA resin based, trowel-applied flooring systems, are self-levelling & rapid setting. MONOTEK® flooring is also highly resilient & flexible. This in-built resilience & flexibility ensures that MONOTEK® is able to withstand heavy impacts & even substantial substrate movement without compromising the flooring surface. MONOTEK® can be easily & rapidly repaired if damaged & anti-slip re-instated when worn in heavy traffic public areas.

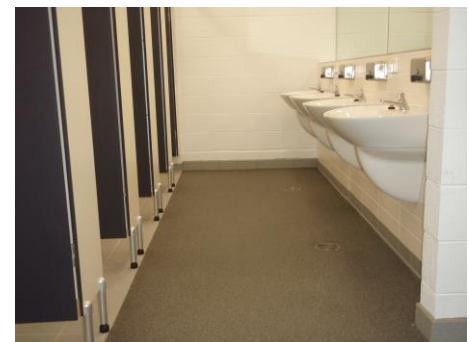

MONOTEK® flooring systems are ideal for the most heavy duty public use areas, as they **TOTALLY CURE IN ONE (1) HOUR** (even at very low winter temperatures), so facility shutdown time can be kept to the absolute minimum. Typically, in an operational public transport platform / pedestrian access ramp application for example, we could commence application works after the last transport service, and have all preparation & installation completed (approx. 50m² each eight (8) hour stage), ready for full public traffic and use by early the next morning. Obviously in new construction, we can quickly complete large areas within tight construction schedules, allowing for other works & trades to rapidly re-commence.

MONOTEK® flooring provides a hygienic, easily cleaned & safe flooring surface (anti-slip can be varied to suit various areas & exceeds the Australian Standards for wet pedestrian traffic), which is highly chemical, traffic / abrasion & UV resistant, yet still highly aesthetically pleasing. MONOTEK® flooring systems can be applied directly over existing sound ceramic tiles, FC sheeting or concrete, and also can be formed vertically into coving for wall/floor junctions & kerbing. Finally, MONOTEK® is available in a wide range of solid colours (including safety yellow & orange), coloured sand / high wear minerals (granite – look finishes) & multi-coloured chip/ flake (**MonoChip®**) finishes, so it will compliment any contemporary public area design requirements.

Typical previous areas of application in train, bus, tram stations, airports and other public access areas for MONOTEK® flooring have been in areas such as –

- PUBLIC TRANSPORT STATION PLATFORMS, STAIRWAYS & PEDESTRIAN RAMPS / OVERPASS / UNDERPASS TUNNELS.
- PUBLIC TOILETS, WAITING ROOMS & CHANGE ROOMS.
- KITCHENS, CANTEENS & ALL COMMERCIAL FOOD PREPARATION AREAS

MONOTEK® flooring systems are exclusively supplied & applied, Australia-wide by **D.P.J. Coating Systems Pty Ltd** (100% Australian owned, family business, established in 1977), and come with an “excuse proof” – 5 year guarantee of professional installation & long term performance. We never use sub-contractors to apply MONOTEK® flooring systems.
